## What are the risks and what could I get in return?

### Risk indicator

Lower risk

Higher risk

The risk indicator is based on the assumption that you will hold the product for 5 years.

If you cash in the investment early, the actual risk may differ significantly and you may get back less.

The overall risk indicator helps you assess the risk associated with this product compared to other products. It shows how likely you are to lose money on this product because the markets develop in a certain way or because we are unable to pay you out.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you.

**Please be aware of currency risk** if your reference currency differs from the currency of the product. You may receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks not included in the risk indicator may be materially relevant:

- Liquidity risk
- Operational risk

Please see the sales prospectus for further information.

This product does not include protection against future market developments, so you could lose all or part of the capital invested.

## Performance Scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product and a suitable benchmark over the last 10 years. Markets could develop very differently in the future.

Recommended holding period:		5 years	
Example Investment:		10,000 EUR	
		If you exit after 1 year	If you exit after 5 years
Scenarios			
<b>Minimum</b>	There is no minimum guaranteed return. You could lose some or all of your investment.		
<b>Stress</b>	What you might get back after costs	3,010 EUR	2,950 EUR

## What happens if IPConcept (Luxemburg) S.A. is unable to pay out?

The default of IPConcept (Luxemburg) S.A. has no direct impact on your payout, as the statutory regulation provides that in the event of the insolvency of IPConcept (Luxemburg) S.A. the special assets do not become part of the insolvency estate, but are maintained independently.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product performs, if applicable. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.
- 10,000 EUR will be invested.

	If you exit after 1 year	If you exit after 5 years
<b>Total costs</b>	187 EUR	1,326 EUR
<b>Annual cost impact (*)</b>	1.9%	1.9% each year

(\*) This illustrates how costs reduce your return each year over the holding period. For example, it shows that if you exit at the recommended holding period your average return per year will be 10.1 % before costs and 8.2 % after costs.

We may split a portion of the costs between us and the person who sells you the product to cover services provided to you. The latter will notify you of the amount if required by applicable laws.

## What are the risks and what could I get in return?

### Risk indicator

Lower risk

Higher risk

The risk indicator is based on the assumption that you will hold the product for 5 years.

If you cash in the investment early, the actual risk may differ significantly and you may get back less.

The overall risk indicator helps you assess the risk associated with this product compared to other products. It shows how likely you are to lose money on this product because the markets develop in a certain way or because we are unable to pay you out.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you.

**Please be aware of currency risk** if your reference currency differs from the currency of the product. You may receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks not included in the risk indicator may be materially relevant:

- Liquidity risk
- Operational risk

Please see the sales prospectus for further information.

This product does not include protection against future market developments, so you could lose all or part of the capital invested.

## Performance Scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product and a suitable benchmark over the last 10 years. Markets could develop very differently in the future.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product performs, if applicable. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.
- 10,000 EUR will be invested.

	If you exit after 1 year	If you exit after 5 years
<b>Total costs</b>	117 EUR	851 EUR
<b>Annual cost impact (*)</b>	1.2%	1.2% each year

(\*) This illustrates how costs reduce your return each year over the holding period. For example, it shows that if you exit at the recommended holding period your average return per year will be 10.4 % before costs and 9.2 % after costs.

We may split a portion of the costs between us and the person who sells you the product to cover services provided to you. The latter will notify you of the amount if required by applicable laws.

## How long should I hold it and can I take money out early?

### Due to the risk and return profile, we recommend a holding period of at least 5 years for this product.

You can, however, return the product in compliance with the return modalities stated in the sales prospectus. Early redemption can have a significant impact on the risk and return profile. The redemption of units may be suspended if exceptional circumstances appear to make this necessary, taking into account the interests of the investors, or limited if the investors' redemption requests reach a predefined threshold above which said requests can no longer be executed in the interests of the investors as a whole. The redemption period may be extended if this is necessary in the interests of the investors. The Management Company may separate certain assets whose economic or legal characteristics have changed significantly or become unsafe due to exceptional circumstances from the other assets of the Subfund. Please refer to the Sales Prospectus for further information.

The so-called "swing pricing procedure" may be employed. It establishes rules and principles to better protect shareholders from the effects of dilution, through activities of other shareholders.
